

# Credit Insurance Application (CIA)

**Credit & Political Risk Insurance (CPRI) workflow application developed for the bank users of insurance covers.**

CIA combines data and reporting tools for transaction and portfolio management, built on a highly customizable low code application platform. CIA leverages structured data captured from initial lending information, insurance RFQs, pricing, approvals, allocations and final policies, as well as comprehensive limit management, to provide a seamless end-to-end operating environment. CIA augments standard internal processes with platform features such as connectivity to brokers and insurers. The application can connect to external market platforms as well as sit on top or alongside existing internal systems.

## The Key Features:

- Productivity Tool: Less re-keying of data, more volumes with less people
- Reduction in Errors: Less time spent on reconciliation or checking of documents, less manual intervention, one data source
- Web-based: Accessible globally for each CPRI principal with user rights for relevant locations
- Easy Reporting: Reduced reliance on pivot tables and huge excel spreadsheets
- Flexibility: Integrate with over market parties (brokers, insurers) and core loan systems through easy to implement APIs
