# FX Prime (FXP)

Genesis FXP is a Trade Capture application developed for FX & Rates Trading Desk users with Prime Broker integration.

FXP supports FX Option trade capture for both single-leg trades and multi-leg strategies, as well as FX Spot, FX Forwards, FX Swap, FX NDFs, FX NDF Swaps, and IRS deals built on a highly customizable low code application platform. FXP is a very resourceful tool to capture FX & Rates voice business and stream trade activity directly into the Prime Broker while simultaneously serving as placeholder for books and records.

FXP augments standard internal processes with platform features such as new trade capture, amendments and cancellations, option expiry monitor and client trade confirmations to provide a seamless end-to-end operating environment. The platform can also connect to external market platforms, as well as sit on top or alongside existing internal systems.
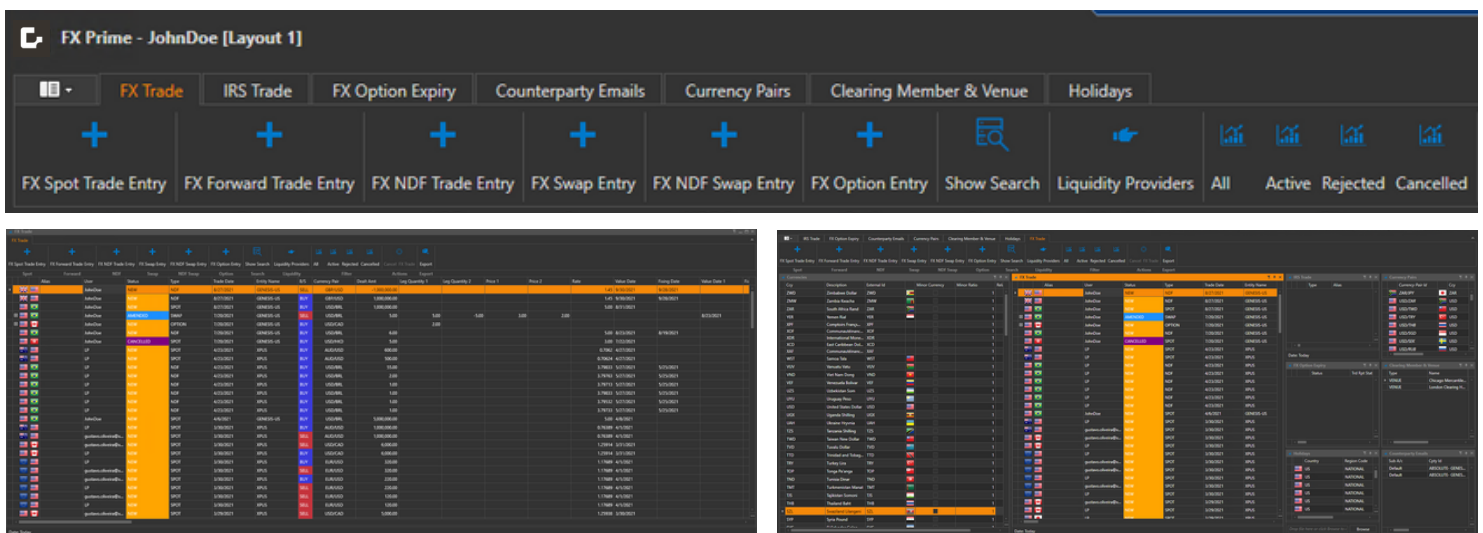

The Key Features:

- **Productivity Tool**
  Less re-keying of data, trading visibility across trading desk members.

- **Reduction in Errors**
  Less manual input, less time spent on reconciliation.

- **Data Archive**
  Placeholder for trading activity and onboarded/ active counterparties, clearing members, Venues, and Indexes.
